Preparing for Your Office 365 Exchange Online Email Migration

Office 365 Supported Browsers

For the optimal user experience in Office 365, Microsoft requires the following versions of web browsers:

- At the least Internet Explorer 9
- At least Firefox 12
- At least Chrome 18
- At least Safari 5

For Outlook Web App (OWA) users accessing email from off campus, using the recommended browser version is particularly important. Note: It will be the user’s responsibility to ensure the minimum browser version is installed on their own personal computing devices.

Minimum Browser Requirements

1. Internet Explorer – IE 9 or above
   a. Support for Internet Explorer 8 will be end in early 2014.
2. Firefox and Chrome - Firefox 12 or above / Chrome 18 or above
   b. Recommend using latest “stable” version for Chrome.
   c. Why use the latest “release” version or “stable” version? Microsoft says: Google and Mozilla do not maintain older versions of Chrome and Firefox, respectively. Also, Google Chrome and Mozilla Firefox are designed to stream updates to your computers, and are updated every six weeks. Many common problems with these browsers are resolved in the next update.
3. Safari – Safari 5 or above
   a. Recommend using the latest version.
   b. To update your version of Safari, perform a Software Update for your Mac operating system.
